## ROTARY CABINET WASHERS

ALMCO Rotary Cabinet Washers come in two different series, the standard Rotary Cabinet Washer (RCW Series) and the Economy Cabinet Washer (ECW Series). Each series varies based on the standard features and optional add-ons that are available. Both series feature a front swing door that opens 180-degrees. With their large work envelope, high weight capacity, and 360-degree spray coverage, Rotary Cabinet Washers can handle an incredibly high variety of applications.

Model: RCW-36E

**Model: ECW-29**

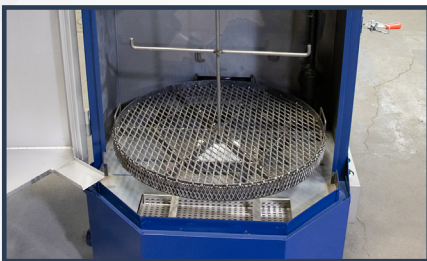

**Economy Cabinet Washer (ECW):** The ECW Series is the most cost-effective rotary cabinet ALMCO makes. The ECW Series includes many standard features, but with fewer options, simpler electrical controls, and mild steel cabinet construction, this series offers excellent reliability at a great value. These washers have one solution tank and one spray pump. Like the RCW Series, the ECW Series washers can handle an incredibly high variety of applications. They feature a front swing door that opens 180-degrees, allowing parts to be loaded by hand or via hoist onto the turntable. Parts are placed directly onto the turntable or into baskets or fixtures, the turntable then rotates, exposing all part sides to the spray nozzles.

#### Standard Features:

- All mild steel cabinet construction
- Heated wash tank
- Float switch for heater protection
- Standard size 29" turntable
- Process timer for each wash cycle
- Variable speed, mild steel turntable/platform
- Safety interlock switch on door
- Removable stainless steel chip tray in wash

#### Options:

- Mild steel turntable/platform

**Model: RCW-36E**

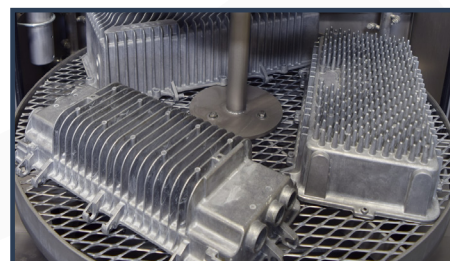

**Rotary Cabinet Washer (RCW):** The RCW Series cabinet washers have many optional configurations in comparison to the ECW Series. This series is constructed of stainless steel and has upgraded electrical controls. They feature a front swing door that opens 180-degrees, allowing parts to be loaded by hand or via hoist onto the turntable. Parts are placed directly onto the turntable or into baskets or fixtures, the turntable then rotates, exposing all part sides to the spray nozzles. These washers are versatile machines that can handle a wide variety of part sizes and shapes. In addition, the simple controls allow for multiple wet and drying stages if needed.

#### Standard Features:

- All stainless steel cabinet construction
- Heated wash tank
- Float switch for heater protection
- Six standard turntable sizes from 24" to 72"
- Process timer for each wash cycle
- Vapor exhaust duct connections
- Automatic water and compound replenishment
- Safety interlock switch on door
- Removable stainless steel chip tray in wash

#### Options:

- Stainless steel bag filtration units
- Variable speed, stainless steel turntable/platform
- Rinse and blow-off stages may be added
- Oil skimmer or coalescer
- Insulated wash and rinse tanks
- Vapor exhaust system
