

WASHING

SFW-20 STATIONARY FRONT LOAD WASHER

The Stationary Front Load Washer (SFW Series) is ALMCO's most cost-effective industrial parts washer. The SFW's cellular design and small footprint is ideal for small-cell applications and ideal for washing chips and coolants from parts immediately after cutting, milling, and other machining processes. This machine features a spring assisted door on the front of the machine.

The SFW is loaded and unloaded via a vertically sliding door. Parts are loaded into a standard basket, placed on the staging tray, then slid into the spray cabinet. The washer features 11 adjustable spray nozzles located above the parts and 9 nozzles below, exposing all part surfaces to the washing solution.

Model
SFW-20

Standard Features:

- Heated wash tank
- Removable chip tray
- Removable basket load tray
- Baskets (2)
- Spring assisted front-load door
- Simple controls and operation
- Digital process timer
- 208/220/240V Single phase power source
- Leveling feet
- Liquid level sensor
- Door safety switch
- Stainless steel construction

SFW-20 - Front view with loading tray and open door.

Top Spray Manifold - Adjustable nozzles.

Bottom Spray Manifold - Removable for tank access.
